

ISHITA SINGH

Full-Stack SDE II — .NET / Angular Systems, Release Engineering & Reliability

Gurgaon, Haryana, India | ishitasingh150301@gmail.com | +91 8920866071 | [Portfolio](#) | [GitHub](#) | [LinkedIn](#) | [LeetCode](#)

SUMMARY

Full-stack SDE II operating .NET/Angular systems at production scale (200+ servers, 120K+ events/day). Owns release engineering end-to-end — from CI/CD automation to reliability and observability — for large public-sector deployments, while coaching junior engineers on release best practices.

TECHNICAL SKILLS

Languages: C#, Java, Python, JavaScript, TypeScript, Dart, C/C++, HTML/CSS/SCSS

Frameworks & Platforms: .NET, Angular, Flutter, Node.js, Android

Backend & Messaging: RabbitMQ, Quartz, Elsa Core, REST APIs, Microservices, Event-Driven Architecture

Databases: PostgreSQL, MongoDB, Firebase, MySQL, Milvus (vector similarity search)

Cloud & DevOps: Azure (familiar), Docker, GitHub Actions, Grafana, Metabase, Git

Practices: System Design, Clean Architecture, API Design, DSA, Release Management, Team Leadership

Tools: Rider, Android Studio, VS Code, Xcode, Figma, pgAdmin, Google Apps Script, AI-assisted dev tools

Spoken Languages: Hindi, English, French

EXPERIENCE

Software Development Engineer II — I2V Systems Pvt. Ltd.

Jan 2023 – Present

- Diagnosed and fixed a recurring RabbitMQ event-handling failure that had required a **daily manual restart**; traced the root cause across code and architecture, restoring continuous 20 events/sec throughput and removing a standing operational burden.
- Designed and delivered a User CRUD and audit-logging module in .NET (Clean Architecture) spanning **30+ tables across 3+ schemas**, with per-user, per-entity action tracking.
- Developed a Quartz-based scheduling engine powering **4+ workflows**, including VA scheduling, report export, and user-log time tracking.
- Own **6+ shared Angular libraries** shipped in every release, supporting 60+ concurrent users across a **200+-server, 120K+-events/day** deployment footprint.
- Automated Windows and Docker releases via GitHub Actions (branch-based release/test strategy), replacing a manual local build-and-share process — **cut release time by 90%** and eliminated config-related deployment failures.
- Lead release sign-off for large public-sector clients across the 200+-server, 120K+-events/day deployment footprint, owning the process end-to-end from branch cut through production rollout and serving as the primary point of contact for deployment issues.
- Implemented Milvus-based vector similarity search for image/video retrieval and created **8+ Grafana dashboards** monitoring 300+ cameras across the same server fleet, with 30-day data export, query optimization, and automated alerting.
- Grew from individual contributor into a **de facto technical lead**, mentoring 4+ junior engineers through code reviews, debugging support, and release best practices.

PROJECTS

Aapka Vakeel — Lawyer-client services platform | Apr 2024 – Present

- Engineered the lawyer-client platform end-to-end (Flutter, Firebase, Azure Functions), covering authentication, lawyer-client matching, and case/request management; onboarded 40+ registered lawyers.
- Integrated Razorpay payments and VideoSDK for in-app lawyer-client video calling.
- Architected a separate admin dashboard alongside user dashboards with end-to-end request tracking.

Avekshaka — Alzheimer's care app | Feb 2022

- Collaborated in a 4-member team on a Firebase/SQLite app for guardian registration, condition-based activity alerts, and live guardian location sharing — Top 8, Microsoft Imagine Cup India Pre-Finals.

EDUCATION

B.Tech, Computer Science and Engineering — Dronacharya College of Engineering

Jul 2023

SGPA: 9.0

ACHIEVEMENTS

- Placed in the Top 8 nationally, out of hundreds of student teams, at Microsoft Imagine Cup India Pre-Finals, 2022.
- Ranked 5th out of 600+ participating teams at Covi-Hack '21, a COVID-response hackathon hosted by GDSC-DCE, 2021.
